

# EU-CHINA BRIDGE

## Building Roadmaps to Industrial Decarbonisation and Green Economy through EU-China Cooperation

The European Union and China play a vital role in achieving global climate neutrality due to their large greenhouse gas emissions, economic power, influence on international trade, and strong competitive position in low-carbon technology industries. Yet, both regions face tremendous challenges in achieving their climate targets.

EU-CHINA BRIDGE is a project co-funded by the European Union and the Ministry of Science and Technology of the People's Republic of China that will support the transition to a climate-neutral and resilient society in both regions.

The project will advance knowledge on technology innovations and roadmaps for decarbonising energy intensive industries, co-create innovative modelling frameworks by combining cutting-edge bottom-up and integrated assessment models, quantify net-zero sustainable pathways, and develop the most updated and comprehensive emissions data.
